🌐 [gsimlop](#) 🌐 [Gsimlop](#) 📍 Albacete, Spain

Professional Summary

Data Analyst and Engineer with a solid background in Physics, specialized in Big Data Analytics and Cloud environments. Highly motivated to continuously learn and advance in my professional career, I focus on the deployment of end-to-end analytical solutions. Passionate about science, data engineering, and machine learning, applying logical reasoning and a structured approach to transform complex data into strategic business value.

Work Experience

Data Analyst / Data Engineer

SDG Group

June 2025 – Present

Hybrid

- **Technical Roll-out HK (Pernod Ricard):** Developed data pipelines in Databricks using a medallion architecture for data ingestion and transformation. Automated SQL macros in Snowflake for efficient model replication across regions, and redesigned Power BI dashboards.
- **Architecture Migration (Pernod Ricard):** Migrated existing architecture to a star schema, optimizing system scalability. Improved backend performance via SQL query optimization and reduced load by implementing complex DAX logic in Power BI.
- **Data Implementation (ITF):** Deployed end-to-end analytical solutions, designing ETL/ELT workflows in Talend for data integration. Structured databases on Snowflake using SQL and developed interactive dashboards in Power BI.

Education

Master's Degree in Big Data Analytics

Universidad Politécnica de Valencia

Grade: 8.73

2024 – Present

Valencia, Spain

Extensive training in machine learning, deep learning, cloud computing, NoSQL databases, and distributed data processing.

Bachelor's Degree in Physics

Universidad de Alicante

Grade: 7.00

2018 – 2024

Alicante, Spain

Strong foundation in mathematics, physics, and computation, significantly developing logical reasoning and problem-solving abilities.

Academic Projects

Implementation of an End-to-End Analytical Architecture for International Expansion in the FMCG Sector

- **Master's Thesis:** Designed and deployed a scalable data architecture to integrate a new international affiliate into the corporate ecosystem.
- Orchestrated data pipelines using Databricks (medallion architecture) and Snowflake, and redesigned strategic dashboards in Power BI to align global data with local business needs.

Magnetic and Optical Properties of CrSBr

- **Final Degree Project (Physics):** Conducted a comprehensive study on the physical properties of Chromium Sulfide Bromide (CrSBr), applying advanced computational and mathematical modeling techniques.

Technical Skills

Programming Languages: Python, SQL, R, Matlab, Shell / Bash

Data Engineering & Cloud: Databricks, Snowflake, Talend, AWS, Docker, Azure Data Factory

Data Analysis & BI: Power BI, DAX, Pandas, Numpy, Scipy

Machine Learning & AI: Scikit-learn, Deep Learning concepts

Tools & Technologies: GitHub / Azure DevOps (CI/CD), Docker, VS Code, VirtualBox

Soft Skills: Problem-solving, Adaptability, Emotional Intelligence, Discipline

Certifications

- AWS Cloud Practitioner Partner Certification — *DataCamp*
- SQL Fundamentals — *DataCamp*
- Power BI Fundamentals — *DataCamp*
- Machine Learning Certification — *Coursera*

Languages

Spanish — Native

English — B2 First (C1 Intensive Course at Irish College of English)
